Terena
Mbaya SK11

tude 22° to latitude 19° S. Presumably, they were in this general area when first discovered by the Spaniards. The Guaná at that time consisted of the following subdivisions: Layaná, Niguecactemie, Tereno, Echoaladi, and the Kinikinao (Métraux, 1946, vol. 1, pp. 239–240). Estimates of the total Guaná population vary. At the end of the eighteenth century Aguirre and Azara gave the total Guaná population as 8,200. The Mbayá also claimed this part of the Chaco as their home but, owing to their nomadic habits, ranged over a wider territory stretching all the way from the present site of Asunción to where Corumbá now stands. Labrador estimated the Mbayá as numbering between 7,000 and 8,000. During this period the Mbayá were composed of the following subdivisions: Cadiquegodí (Caduveo), Guetiadegodí, Apacachodegodegí, Lichagotegodí, Eyibogodegí, Gotocogegodegí, and Beutuebo (ibid., vol. 1, pp. 217–218).

Early writers, imbued with medieval conceptions of political status, claimed to see in this interdependence a relationship of lord and serf after the European pattern. This view on the basis of their own evidence appears exaggerated. A thoroughgoing system of social stratification based on cultural differences usually implies some degree of political unity and marked distinctions in status and social functions. The Mbayá never achieved political unity as a tribe nor did they exercise organized authority over the Guaná as a whole. To the end of the Mbayá remained organized on a "band" basis. The Guaná always had their own lands and villages, their own social organization and chiefs. The fact that the Mbayá chiefs married Guaná women of rank seems to imply a degree of equality between the chiefly classes of the two peoples.

Through intermarriage Mbayá chiefs are said to have become chiefs of Guaná settlements. Just how this political domination was achieved is not made clear. It is stated that the Guaná had female chiefs and that marriage with a Mbayá chief gave him rights over his wife's people. There is some doubt that the Guaná had female chiefs—the Terena, for instance, stoutly deny this. Even if this were true, it is not clear how a female chief's husband could usurp his wife's position in a tribe where female chieftainship was a culturally defined rule. When we learn that the

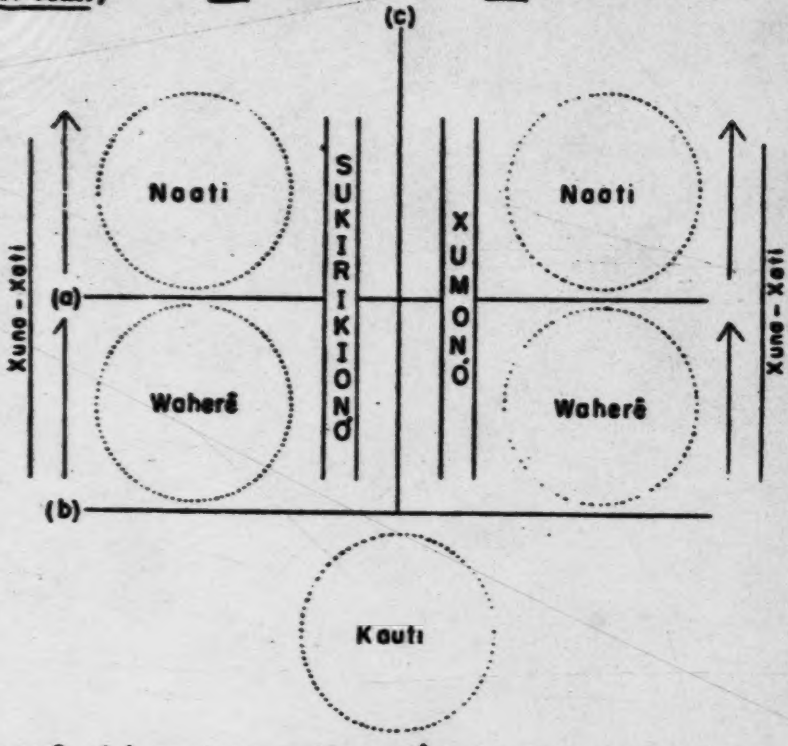

Figure 2. Schematization of the Terêna-Guaná social structure, formed by the superimposition of two substructures: 1) the terms written horizontally represent the threefold and asymmetric substructure (see Figure 1); the terms written perpendicularly in capital letters represent the twofold and symmetric substructure. The dividing lines (a), (b) and (c) correspond to a compartmentalization into five parts or five possible marriage situations, represented by the dotted circles. The dynamism of the threefold structure is due to the Xuna-Xati, noted perpendicularly and with arrows indicating vertical mobility.

616 173 114 [62] Cohishotiquipahú...." (72) By plumbing the oral tradition of the Terêna, especially of the /48/ Buriti, Bananal, Ipegue, and Cachoeirinha local groups, we were able to corroborate this

72. 1928:109.

/50 cont./ [Traditional Culture]

"Hawaiian," after Murdock, (79) and to understand how unlikely

79. Cf. 1951:64. Given the characteristics of this work, we did not deem it necessary to publish and analyze the Terêna kinship tables. The interested reader will find them in Altenfelder, 1949:327-334 and in Oberg, 1949:31.

it was for the traditional social structure to survive, once the group was atomized in such a way as to impede or make overly difficult marriage within the local group. This led, naturally, to an exogamy of the local group, enforced as long as regular contact among the old aldeas was possible. With the Paraguayan war--as we shall see in the next chapter--, when these aldeas were destroyed and their inhabitants scattered among the fazendas that were beginning to arise in large numbers, the old structure no longer had the conditions for its survival. Also to be emphasized with respect to marriage is its monogamous character, combined with polygyny, including its sororal form. Finally, we can say that the ancient Guaná appear to have been matrilocal, despite the fact that the Terêna incline toward bilocality and neolocality. We believe that these indications are sufficient to give an idea of the Guaná-Terêna social structure, before we close this chapter with a brief account of the traditional superstructure.

For giving us an outline of Guaná religion, the chroniclers /51/ provide us with extremely uncertain data. Information from the middle of the last century indicate that the Guaná "believed in the existence of a great spirit charged with moving the sun," (80) and showed a certain respect for him. (81) But

80. Castelnau, 1949:304.

/71 cont./
175 Indians and a large number of aldeas. (134) This chronicler,
361
103
342
[114] J. Bach, merely cites those he visited, namely: Agachy, Boquehina, Marro, Marrinho, Ipegue, Santana, and Caytapé; and he states that "all the aldeas present the same type of construction, which is crude, consisting of houses or ranchos with bamboo walls and roof of straw or palm leaves." (135)

135. Ibid.

103 The first difficulty we met with was in looking for the connec-
361 tion of these names, evidently regional--with the exception
174 of Ipegue and, perhaps, Caytapé--, with the tribal names
[173] attributed by the Terêna to their aldeas. We had to resort to the oral traditions of the Terêna, and we obtained the following data which we compared with those gathered by Altenfelder: (136) Imokovookoti or Bookoti, /72/ the self-denomination

136. 1949:281.

of the local group, whose survivors occupy the present-day aldea of Cachoeirinha, three leagues northeast of Miranda; Ipegue, the same local group referred to by the two chroniclers mentioned; Tuminikũ, the local group that probably formed the present-day aldea of Bananal; Kamakuê, the local group that occupied the area where there today the neo-Brazilian settlement of Duque Estrada is; Hãokoé, a small aldea one league from Tuminikũ; Naxedaxe, already referred to by
● [62] Taunay; Sinikué, a Terêna name attributed to the former aldea of Guaykuru Indians, also known as Lalima, and today populated by innumerable Terêna, Kinikinau, and Layâna families. All these aldeas were located between the cities of Miranda and Aquidauana, with a greater concentration near the former.

/73 cont./

361 their lands and drawing them into the colônias of the fazendas.
178 The history of interethnic relations records that a large number
648 of aldeas disappeared in the past, leading their members to
[166] attach themselves to fazendas or to remain as a mobile unit,
moving from fazendas to settlements and cities, and vice versa,
128 immersed in a continuous process of detribalization. In this
chapter and in the following one we shall deal only with the
situation of the Terêna aldea population; the one that now lives
in relatively independent and stable communities, whether or
not they are under the supervision of the Serviço de Proteção
aos Índios.

361 By municípios, we can note the following: Município of
[103] Miranda: Cachoeirinha, Passarinho, Moreira, União, and
Lalima; Aquidauana Município: Bananal, Ipegue, Limão Verde,
and Aldeinha; Nioac Município: Brejão; Sidrolândia Município:
[162] Buriti; Dourados Município: Francisco Horta. Beside these 12
communities, which will be the subject of ecological char-
acterization in the present chapter, we might point out two
other communities which are totally or partially made up of
[103] Terêna Indians. One of them, São João, in the state of Mato
Grosso, and another, Araribá (Curt Nimuendajú Native Post) in
●621 São Paulo. The former, São João, within the Kadiwéu reser-
162 vation was formed by introducing Terêna families into a distant
648 part of the fazenda /retiro/ on the bank of the Aquidavão River
and close to the Bodoquena mountain range, in order to insure
ownership of those lands through settlement. The latter,
Araribá aldea, occupied by Guarani Indians, in 1932 got a few
Terêna families (about 50 individuals) whose mission was to
prod the Guarani, by their example, to the agricultural work
162 of the reservation. Nevertheless, it cannot be stated that these
are the only Terêna clusters, since a relatively high percentage
of families are still scattered among the fazendas, probably
living in their colônias, mixed in with neo-Brazilian colonos.
[177] Such families, in spite of being quite disorganized--in terms
[619] of the /74/ traditonal patterns--, still continue to regard
[574]

Cachoeirinha

/74 cont./ And if we compare the successive
censuses it has undergone since 1919, the date of the first we know of, we see that its population has steadily increased. In 1919 Cachoeirinha had 228 persons; in 1926, 436 individuals; in the following year, 1927, it recorded 503 persons, of which 72 had come from outside; 10 years later, in 1937, another increase was ascertained, giving Cachoerinha a population of 750 individuals; in 1941, the reports of the SPI give the same population which, from then onward, is seen increasing until it reached the figure obtained in 1954. Before 1919, we can only point out a fact still remembered by those Indians: at the end of the last century, probably in 1890, the Terêna suffered the consequences of a guerrilla episode when two local political leaders opposed each other and, as a result of this fight, a series of raids and attacks on a fazenda close to the aldea (Fazenda Santana of Zózimo Filho--/75/ today Petrópolis fazenda) were attributed to the Terêna; from being accused, the Terêna went on to be debtors, when "Colonel" Zózimo demanded from them full payment for the "thefts" committed.... Compelled to work without pay on the lands of Fazenda Santana, they rebelled and in large numbers left the aldea, taking refuge partly in Bananal, partly atop the Maracaju range. Our informants explained that these families did not return to Cachoeirinha and that the successive groups of people who came to swell the local group had originated primarily in Lalima and the Salobra fazenda, beyond the Miranda River.

Cachoeirinha includes 2,260 hectares, measured and the boundaries set since 1905, by the Rondon Commission, and the definitive title was proclaimed in the following year. The Cachoeirinha Native Reservation--like the others, territory under federal jurisdiction--, has various clusters of dwellings, each of them reflecting a specific development of the community. Thus we have, in the first place, the nucleus proper of the aldea, made up of the ranchos of the older families, among which the dwelling of the "Captain" of the aldea stands out. In this same nucleus we find the building of the native

/75 cont./ [Cachoeirinha]

361 post, that of the school, and that of the church. (138) It is
621
[368]

797 138. The only church in Cachoeirinha is Catholic; two North American padres of the Order of Redemptorists are located in Miranda and Aquidauna from where they go through the Terêna aldeas.

798 The community is characterized by its resistance to the entry of Protestant missionaries, and its members are called Catholics, but by self-definition. There are only two Protestant families, both of whom came from Bananal.

361 made up of 53 ranchos and, at the time when we were there,
621 we counted 309 persons in this area alone. Nevertheless, it
[524] might be said that this nucleus is divided into two "bairros /barrios/," Cachoeirinha proper and Cruzeiro, at present very little differentiated, but which in times past were to some ex-
[363] tent rival groups with their own futebol teams. It should be added that these 53 ranchos are distributed in squares duly divided into streets, with leafy mango trees and rich vegetation, where quite wide and grassy streets stand out.

Argola is the name given to a former aldeamento which, as its name /"ring"/ indicates, follows a circular arrangement of its houses, probably as a survival from the traditional Terêna aldeamentos. Today, this name is used to designate 23 ranchos and their respective /76/ land plots, located in the same place as the original Argola and, for this reason, keeping the same name.

[Cachoeirinha]

/76 cont./

361 A third cluster of 18 ranchos, called Capão, makes up
● 62 the newest part of the native reservation and consists of families
[166] who came from other aldeas, especially from Lalima. It can
[556] be said that this area stands for all that is most progressive in
Cachoeirinha, including among its occupants two of the richest
177 families on the reservation. Although our aim here is to limit
433 ourselves to a descriptive explanation of the Terêna local
166 groups, we can mention that one of the factors basic to the
621 economic development of Capão is the extremely varied and rich
experience acquired by those families in their moves from one
aldea to another, frequently by way of fazendas and neo-
000 Brazilian settlements in the region. (139) Finally, both in

[156]
[829]

139. The interviews we had with these families, as well as some "life histories," permit us to conclude that these experiences were important to the birth of a "mercantile" mentality, which is practically nonexistent in Cachoeirinha. One of the most immediate results is the employment of Indians from the central nucleus on the Capão "fazendas," particularly on that of the ambitious Terêna, Lúcio Souza, a former worker on the Noroeste do Brasil railroad and former owner of a lot in the city of Miranda (he chose to return to Cachoeirinha, because his land in the city did not allow the development of his plantations).

[464]
[159]

[Cachoeirinha]

176 cont./ Finally, both in
361 Capão and in Argola, the land plots are situated close to the
241 ranchos, which gives these nuclei an appearance similar to that of small farming fazendas, their chief crops being manioc--with which they make flour--, maize, rice, moranga /Cucurbita maxima/, abóbora /gourds/, bananas, etc.

[621] Other areas of population concentration, such as Saipuri, Buritizal, Vazante, and another score of ranchos scattered through the reservation are given the generic name of roças /farm plots/. This is due to the fact that the planted plots are adjacent to these ranchos, in contrast to the central nucleus, [231] which does not have this. The presence of cattle in this central [417] nucleus, along with pigs and chickens, loose in the aldea streets, prevents the families from having their planted plots close to the ranchos and compels them to have them in areas somewhat removed and duly protected with barbed wire fences.

162 The community is made up almost exclusively of Terêna
621 Indians. Taking the data of the census we carried out in 1957, as an illustration, we see that out of 907 inhabitants, 729 were Terêna, 16 were /77/ Kinikináu, and nine were Layâna, while the rest were mestizos, the fruits of interethnic and intertribal unions.

439 Trade between the native aldea and the neo-Brazilian population nuclei, such as Duque Estrada and Miranda, is rather active, owing to the lack of economic autonomy of
434 Cachoeirinha (like the other Terêna communities). With the
439 exception of a few families--such as those referred to above as
[556] "the rich," --whose members are not employed on the regional labor market, the rest subsist on the labor of the male element (father, husband, and brothers) whose salaries are channeled to the business houses of Duque Estrada, Agaxi, (140) and

[361]

140. Agaxi is a small settlement, even smaller than Duque Estrada, situated southeast of the reservation, next to the river of the same

/77 cont./ Cachoeirinha

361 name and with which a few
439 Capão families--whose ranchos border on the settlement--maintain trade relations.

434 especially Miranda, where they buy fat ("grease"), macaroni,
439 some meat, salt, etc., as well as clothes, occasional household equipment, and brandy, which is forbidden on the reser-
433 vations but is nevertheless found there. Unfortunately, we
128 have no data that would permit us to make an exact appraisal of the amount of the production of the aldea and its distribution through nuclear families. True, we could give estimates, but they would be of no comparative value since we could not carry
433 out the same procedure in relation to the other aldeas. It is sufficient for us to know that the production of most of the families (i.e., the production resulting from labor undertaken
[439] on their own lands) falls far short of their consumption. And we can illustrate this with the fact that a considerable number of families buy outside the aldea supplies such as manioc flour, which, in fact, is the principal product of the community.

Passarinho, Moreira, and União

62 Pássarinho and Moreira aldeas occupy two contiguous
[361] areas, situated in places near Miranda and have a total popu-
[162] lation of 239 persons. Like Cachoeirinha, these aldeas for
[166] some time have had an influx of families from other aldeas and fazendas, while they themselves have supplied Cachoeirinha
[162] with some individuals. In 1927, the population of Passarinho was estimated at 110 persons and that of /78/ Moreira at 98.
[361] At that time, Passarinho--the closer one--was two kilometers from Miranda; now, it can be said that both are no more than suburbs of the city, so bound to it are the lives of their members

178 cont. / [Passarinho, Moreira, and União]

[62] and so close to them has the city come, by virtue of natural development and expansion. Nowadays, Passarinho and Moreira number, respectively, 109 and 130 inhabitants, who make up a relatively homogeneous population consisting largely of Terena Indians (who identify themselves as "pure"), mestizos, and an occasional neo-Brazilian.

[139] [361] [141] The means of communication of these aldeas connect them with Miranda by a small road, at the entry of which there is a "bolicho" (141) that supplies the Indians with hard-

[104]

141. "Bolicho" is a regional term applied to the small roadside stores that have in stock all kinds of merchandise, from food to cloth and iron tools.

[139] [361] ware and drinks. The native post, located in Passarinho, has not been in operation for many years; suffice it to say that the last man in charge of it was the owner of that "bolicho" and never lived in the aldea or duly attended to it: on the contrary, he made use of his position to improve his business, at the cost of the exploitation of the Indians and civilizados thereabout. (142) This road connects Passarinho with Moreira,

142. To give an idea of the role that was played by this individual in the native community, it is enough to say that at the time of our visit to those aldeas, no one knew him as the post superintendent, but he was rather well known as "the bolicheiro." Aside from

[Passarinho, Moreira, and União]

/78 cont./

being a federal deputy and "bolicheiro," he had obtained the post of "delegado de quarteirão" of the município of Miranda; it is said of him that it was common to find in his "bolicho" firearms taken at night from ill-advised people who went up the road with weapons; and as delegado, he did not hesitate to arrest and order a beating for those Indians who for one reason or another had a disagreement with him.

This road connects Passarinho with Moreira, the latter being quite close to the União local group--which results in rather intensive contact between these three aldeas.

União is a special case. It originated in 1946, as the result of a disagreement in Bananal aldea, (143) which led to

143. For details on the matter, see pp. 121-122.

the departure of the two principal Protestant leaders of the community, who, with their families, went on to occupy a 73-hectare lot which they had acquired. The son of the principal leader, Patrício Lily or Wollily--the present leader of the small União community--, told us that on November 20 /79/ of that year, the families settled on those lands and there founded, months later, in 1947, the "Escola Evangélica União." In 1948, the informant went to study at the "Instituto Bíblico Eduardo Lany" in Minas Gerais, where he remained for four years, three of them in the regular course to become an evangelist and one year devoted to a rural-teacher course.

[Passarinho, Moreira, and União]

/79 cont./

159 875 He went on to say, with obvious satisfaction, that he was the first Indian to study in that Instituto Norte-Americano da Missão Presbiteriana--and that he was followed by another Terêna, Hermes Baltazar, today his closest collaborator at the aldea school.

621 872 As the school grew, it developed into an aldea, since it not only served Indians but also the surrounding neo-Brazilian population. With the construction of the second school building in 1951, the community had the facilities to maintain a complete course of primary studies.

725 162 The supply of pupils for the "Escola Evangélica União" includes neo-Brazilian children, the offspring of small-farmer "Believers" /crentes/ (as Evangelists are called), the Terêna of Moreira aldea, which is made up almost exclusively of "Believers"--in which respect it differs from and up to a certain point contrasts with Passarinho--, as well as the children of União aldea itself, which at the time of our visit numbered some 10 families and a corresponding number of houses.

361 312 628 If we compare the three population nuclei of Passarinho, Moreira, and União, we see that the situation of the last mentioned is far more favorable: aside from covering an area somewhat smaller than that of Passarinho (118 hectares) and larger than Moreira's (53 hectares), it possesses a sizable water reservoir /tanque dágua/ that is the envy of some neighboring farmers, who do not hesitate to turn their cattle loose on União lands, which

233 241 naturally displeases the Indians. The latter own cattle and plant extensive plots of manioc, maize, beans /feijao miúdo/, cane, and other species, more or less the typical products of Terêna agriculture and of the regional "domestic farming." Neither Moreira nor Passarinho have

361 312

[Passarinho, Moreira, and União]

/79 cont./ reservoirs /açudes/; all the water is obtained from wells, of which there are not more than three for both villages; and if we compare the census figures for each, we see that the smallest population (10 families in União) occupies the best aldea. In the following chapter, we shall analyze the causes that led this local group to progress more than its neighbors, who are more numerous and who have lived much longer in the area. Nevertheless, the /80/ three aldeas--more so than Cachoeirinha--maintain very intensive relations with Miranda. The greater spatial proximity contributes to this, but also, and principally, socio-economic factors that, although they may be explained in part by that proximity, result far more from causes of a sociological nature, which we shall analyze later on.

Lalima

Among all of the Terêna local groups, Lalima appears to be a community sui generis. Strictly speaking, it should not be classified here as an aldea making up part of the Terêna context. If we take its ethnic composition, we see that Lalima is made up of remnants of quite diverse origins, such as Guaikurú, Kinikináu, Terêna, Layâna, and Kadiwéu (one couple), aside from large numbers of mestizos and some neo-Brazilians, married into the community. The origin of this aldea is not very clear. Its oldest inhabitants say that it was through a notice from

[Lalima]

/80 cont./

175 lands that were set aside for them by the Crown and that
162 have not yet been demarcated." (The italicization is
361 ours--RCO.) What can be deduced--taking both sources
648 into account--is that the Guaikurú local group, although already located there for a long time, probably since the 18th century, had not, until Rondon passed through that area, achieved a stable position, which they only attained fully with the creation of the Serviço de Proteção aos Índios.

● 621 /81/ Those data, extracted from the Relatório Anual
162 /Annual Report/ (1919) of the Inspetoria /"Inspectorate"/
161 of Mato Grosso, give the aldea as populated by 130 per-
[175] sons, 25 families, and 20 ranchos; and, to judge by what the S. P. I. inspector wrote, it was a Guaikurú population. Yet, the 1925 census gave Lalima with a population of 261 individuals, which shows a fabulous increase, only explicable by the arrival of native contingents from other tribes, especially Kinikinâu and Terêna. It seems that this was the time when Lalima reached its highest population. After this a decline began, the causes of which
621 are not easy to ascertain. In 1926, we had the following
16 demographic picture: previous population (1925), 261 inhabitants; Indians settled in the aldea during the year, 3; births, 6; Indians who moved to other aldeas, 24; deaths, 6; total in 1926, 240 persons. In the census of the following year, we have: births, 7; Indians who moved
621 out, 23; deaths, 4; total in 1927, 220 inhabitants. At
162 present, the official data sent to the Directoria do Serviço de Proteção aos Índios by the Inspetoria of Mato Grosso gives 256 individuals, although in our "survey" we registered 234 persons, broken down as follows: adult male

[Lalima]

/81 cont./

/62/ population, 51 persons; adult female, 53; under fourteen
/62 years, male population, 68; under /fourteen/, female,
[166] 62. We have there a young population, with great possibilities for growth, in spite of the continual departure of families to other aldeas closer to Miranda, such as Passarinho and Cachoeirinha. (145)

[295]
[298]

145. The inhabitants of Lalima, "Catholic" by definition, avoid communities characterized as Protestant, such as União and Moreira, not to mention Bananal.

36/ The 3,600 hectares that make up the reservation are
[34] found concentrated in an area that is one of the most fertile in the region, bound on the north and east by Guanandi stream, on the south by Barreiro stream, and on the west by
36/ the right bank of the Miranda River. Like Cachoeirinha--
62/ and in the same manner as most Terena aldeas--, Lalima includes more than one population nucleus: a) Lalima proper consists of a cluster of 20 houses, nearly all of them
[36] laid out in one line and thus forming only one street; this cluster includes the building of the native post and the school, as well as the Catholic church, thus rating as the chief nucleus of the community; b) another cluster is called Campina /82/ and is characterized by being inserted in the area where the aldea farm plots lie, like the Argola and Capão nuclei of Cachoeirinha aldea; we counted
[233] 11 ranchos; c) finally there is Divisa, the name given to a

[Lalima]

/82 cont./

group of seven dwellings situated near Barreiro stream, on the boundaries of the reservation, in an area of campos utilized for cattle-raising by the Serviço de Proteção aos Índios and by the Indians themselves.

As for the production areas of the community, it can be said that three-fifths of the reservation consist of winter pastures and "second-growth" campos for cattle-raising. The remainder is used for buildings and farm plots. As can be seen, Lalima is characterized by being an aldea tied to pastoral activity, in spite of /the fact that most of the Indians work on/ their farm plots and at the extraction of angico bark on the fazendas of the município. Very few families own cattle, and only a small number of men are called upon to work with the post stock-raising.

Lalima's chief means of communication with the outside are two roads; one, 48 kilometers long, that goes to Miranda, and another, about four kilometers long, that connects the aldea to Pôrto Lalima, on the Miranda River. Each of these roads has, at points favorable to trade with the Indians, a "bolicho" that supplies--at prices much higher than in Miranda--varied merchandise to its population. The nonexistence of frequent and inexpensive boats to Miranda makes the most common means of access to the city the long road, which is usually traveled on foot. This seems to be the factor most conducive to the constant immigration of Terêna Indians to the aldeas close to the city, as referred to earlier. Among the tribal contingents that increased the population of Lalima, the most important are the Kinikináu and the Terêna; and everything indicates that while the former remained in Lalima, the latter was the one that became the group to show the greater mobility.

/82 cont./
Bananal and Ipegue

361 Bananal and Ipegue are two contiguous aldeas, close to the neo-Brazilian settlement of Taunay, from which they are [491] respectively four and eight kilometers distant. They are [496] situated in the Aquidauana município, and between them and Cachoeirinha it is no more than four leagues, which can be traveled on /83/ an old road, cut through the woods, or by the Noroeste do Brasil railroad, which connects the Duque Estrada stations with Taunay's.

162 The first accurate census data available compel us to ● 621 deal with them as a unit, because they give the total population of the reservation--which is only one, comprising the two aldeas--, without differentiating between the local groups. Thus, in 1918, Bananal-Ipegue presented the following statistical picture: male population, under ten years, 137 individuals; from eleven to twenty years, 133; from twenty-one to sixty years, 103; over sixty, 35 persons; female population, from zero to ten years, 100 individuals; from eleven to twenty years, 67; from twenty-one to sixty, 140; over 166 sixty, 35; giving a total of 750 individuals. By this time there was a constant influx of Indians to Bananal and Ipegue, coming from "colônias" set up on the fazendas of Miranda and 161 Aquidauana municípios. And in spite of the departure of a 162 considerable number of individuals for Cachoeirinha, around 621 1920, (146) in 1926 a population of 1,330 individuals was

161 146. Consulting the 1921
166 report of the Mato Grosso
621 Inspetoria, we read: "The
[[13]] Indians keep coming in but
they already feel that
Bananal and Ipegue cannot
hold them much longer;
and they are shifting to

[Banana] and Ipegue]

/83 cont./ Cachoeirinha. Sr. R. W. tells us that this influx is also due to the inroads of Protestantism, which incidentally is limited to Bananal alone"--and we might add: due to the internal conflicts emerging from that situation.

161 registered at the Taunay Native Reservation or Post (including
162 Bananal and Ipegue); in 1941, there were 1,800 persons; in
621 1946, /the population/ declined to 1,379, and finally, in
[184] 1955, there was another decline to 1,060 individuals. It is interesting that this population decrease did not occur in a homogeneous manner, if Bananal and Ipegue are considered separately: whereas in 1946 Bananal had 995 inhabitants and
161 Ipegue 384, in 1955 Bananal had 617 and Ipegue 443. One
166 concludes that the population decrease occurred only in
621 Bananal and that Ipegue underwent a slight demographic in-
184 crease, which seems to point to the politico-religious conflicts
578 in Bananal as the causes of the exodus. Many Indians who
166 identified themselves as "Catholics," moved to Ipegue or to
162 Cachoeirinha, communities which up to today have not been
621 effectively reached by Protestant proselytism; and, on the
795 other hand, many "Believers" moved to União and Moreira and marked them as Protestant communities, as indicated in earlier pages.

361 /84/ Bananal is undoubtedly the most important Terêna
621 aldea and the most "urbanized," including houses, some of
[177] brick and the majority of adobe, but duly whitewashed and laid
[342] out with perfect symmetry, forming streets and blocks in
[36] good town fashion. In this area we have the Taunay Native Post, the school building, the Catholic church, the Protestant church, the "bolicho" of a Terêna, and the post guest house, as well as 84 Terêna dwellings.

/84 cont./ [Bananal and Ipegue]

361 as well as 84 Terêna dwellings. Aside from this central
311 nucleus, we find--as in other Terêna aldeas--areas especially devoted to farm plots and others comprising winter pastures for cattle; in both areas, there are ranchos where a significant
175 part of the community lives. The history of Bananal is very
● 621 important to an understanding of those migration movements
166 we are studying in this chapter. For this reason, we refer the
648 reader to the already mentioned research of Fernando Altenfelder
[114] da Silva, devoted to the study of the cultural change of the Terêna, on the basis of data obtained in Bananal. We shall quote the following passage from this author on the history of
[162] the community: "The present aldea of Bananal, which numbers more than 900 Indians (this in 1946--RCO), originated at the beginning of this century, in an area close to that of the old aldeas of Naxe-Daxe and Ipegue. Owing to the persecutions stirred up by the local fazendeiros, very few Indian families
[622] remained in this area. . . . In 1906 the Brazilian, João Gomes, who lived with a Terêna woman, "named" the Indian, Manoel
[423] Pedro, captain of Bananal aldea. In 1908, Manoel Pedro and some Indians, among them Marcolino Wollily (who later succeeded him), began the demarcation of the aldea lands, probably directed by General Rondon, who had been there
[622] making a survey of the area. In 1915 Marcolino Wollily was appointed by the S.P.I. to the post of captain of the aldea and distinguished himself in the defense of Terêna interests against
[797] the constant demands of neighboring fazendeiros. Converted to Protestantism, Marcolino caused part of the aldea to be converted as well." (147)

147. 1949:285.

175 The importance of the Marcolino "affair" is evident.
621 After reading Altenfelder and living, as we did, for some time
797 in the aldeas that maintain the greatest contact with Bananal,
622 we felt at once the impact there of the Marcolino matter and his politico-religious activities.

/84 cont./ [Bananal and Ipegue]

175 his politico-religious activities. In this /85/ respect, it is
621 fitting to give some idea of the history of the problem. To
797 this end, nothing could be more suitable than to resort once
[648] more to Altenfelder: "On a charge that they had instigated the Indians against the authorities of the S. P. I. the missionaries of the Inland South America Missionary Union were, in 1920, expelled from Bananal. In 1925, resuming the activities of this organization, North American missionaries of the South America Indian Mission settled in Bananal and have since
175 continued to catechize the Terêna. In 1933 Marcolino Wollily
621 was arrested and stripped of his post as captain of the aldea,
622 on the charge of fomenting a rebellion against the S. P. I.
648 A triumvirate system was tried, in which the three mainstreams
[795] of the aldea were represented: the Protestants, non-Protestants (or Catholics), and the S. P. I. But the system was not successful, and a year later Marcolino was reinstated as chief of the Indians." (148) And this situation lasted up to 1946, as we

148. Ibid.

have seen, when that leader, due to new frictions that arose between him and the post, withdrew to the place that later was to become União.

166 The consequences of the Protestant penetration--while
621 explicable on an ecological basis--were to be felt not only
798 in the move of large numbers of non-Protestant Indians to
162 Ipegue, but also in the isolation of the families regarded as Catholic in specific areas, such as the place called Morrinho, where three non-Protestant extended families live in half a score of ranchos; in the central nucleus of the aldea, made up for the most part of Protestant families, we found these concentrated along the main streets.

361 Concerning Ipegue there is not much to be said. Ever
628 since Bananal came into existence, Ipegue remained more or less as its satellite. The progress of Bananal, that is, its

/85 cont./ [Bananal and Ipegue]

361 tendency to urbanization, did not fail to contaminate Ipegue,
[628] for the simple reason that the inhabitants of Ipegue had to go
[496] through Bananal to reach the railroad line; this owing to the geographic position of Bananal, situated between that aldea
[133] and the neo-Brazilian settlement of Taunay. The boundary
[132] between the two aldeas is Ipegue stream, full during the rainy reason--December to February--and reduced to a stream in the
[312] dry season, easily crossed on foot. It and two reservoirs, one in each /86/ of the aldeas, supply the communities with water.
[231] Which is not to say that in some years Ipegue and Bananal have not suffered from total drought; this is also the problem of Cachoeirinha, Passarinho, and Moreira.

[184] The layout of Ipegue is the same as that of Bananal,
[348] excepting naturally that degree imposed by the tendency to a more rapid urbanization of the latter. It comprises a central nucleus of 50 houses, aside from the post (a subpost, subordinate to the Taunay Native Post), the school, and the Catholic
[497] church. At the boundary with Bananal, that is, close to Ipegue stream, thus next to the road that connects the two aldeas, we find five ranchos with their respective farm plots. On the other side, northwest of Ipegue, on the boundaries of the reservation, there is a concentration of ranchos, about a half
[241] score, at the place called "Roças." Similarly to Cachoeirinha and Bananal, the farm plots of the inhabitants of the central nucleus are quite far off, in duly fenced-in areas, protected not only from cattle but also from pigs and chickens.

● 621 Ecologically speaking, Ipegue and Bananal are tied to
439 the city of Aquidauana, whereas Cachoeirinha, Moreira, Passarinho, União, and Lalima are tied to Miranda. The major purchases in those communities are made in Aquidauana,
[441] while minor ones are made in Taunay. In this regard, we had
[443] the opportunity to meet the Terêna "bolichoeiro" of Bananal, in Aquidauana, and we saw the amount of his purchases to supply his store in the aldea. But, aside from Bananal and Ipegue, two other aldeas are also tied to Aquidauana and far more intimately so: they are Limão Verde and Aldeinha.

/86 cont./
Limão Verde and Aldeinha

361 Strictly speaking, Limão Verde includes two aldeas:
621 Limão Verde proper and Córrego Sêco. Both occupy an area
162 of 2,500 hectares a few kilometers from Aquidauana. In 1927 there were 162 Indians living in the aldeas. Unfortunately this census, carried out by the Serviço de Proteção aos Índios, does not specify the distribution of this population between the two aldeas. The 1954 census gives a population of 246 individuals and incurs the same imprecision as the previous one.

621 Limão Verde--we refer here to both aldeas--is the only
648 Terêna community whose lands have not been demarcated
[423] and /87/ despite some attempts by the S. P. I. to "reserve them," continue to belong to Aquidauana município. And up to now Limão Verde does not have its native post. Its
176 history goes back to a distant past. We were told that the
621 community has existed since the Paraguayan war and that it was founded by a man called João Dias, a bandeirante from São Paulo. This bandeirante lived with a Terêna Indian woman, at the place where Aquidauana is today; he was granted his glebe for the foundation of the city, moving to Morrinho, one league northwest of Aquidauana. He worked in the place called Córrego Sêco, one league from Morrinho, with cattle and farm plots. After his death, his sons left Morrinho and went to settle in Córrego Sêco and at the place called Limão
175 Verde. The captain of Limão Verde--where a small con-
621 centration of Terêna Indians must have already existed--was
622 the famous Lutuma, known throughout the region for his deeds in the Paraguayan war. With his death, his position was left vacant, and João Dias took advantage of this to seize the chiefship of the aldea. But he never lived in Limão Verde. His son, Daniel Dias, when he inherited the "captain's" post, moved to Limão Verde. The Dias family scattered through Córrego Sêco and Limão Verde and, today, the "captain" of both nuclei is Sebastião Dias, grandson of Daniel.

/87 cont./ [Limão Verde and Aldeinha]

162 Among all the Terêna communities, it seems that Limão
●621 Verde is the one with the most diversified ethnic composition. Probably even more so than Lalima. In the Limão Verde nucleus alone there are 10 neo-Brazilian families and two Paraguayan ones, aside from many mestizos of Terêna origin. In Córrego Sêco, however, there are only Terêna families, undoubtedly
621 owing to its more isolated geographic position. As in Bananal,
798 there are in Limão Verde serious conflicts of politico-religious
797 origin. In the community (as in the other Terêna aldeas), North American Redemptorist padres work hard at the religious proselytism of their members. Also Protestants, of the same Bananal group, endeavor to convert Indians, Paraguayans, and neo-Brazilians to their creed. The result of this has been the division of the small Limão Verde nucleus into Catholics and Protestants and the identification of Córrego Sêco as a Catholic nucleus (in the same way as Ipegue).

162 Going from Aquidauana to Limão Verde, one passes
361 through three population nuclei: in the first place, Morrinho,
368 where we found several /88/ bolichos, among which that of the
871 "Paraguayan" was the biggest and the best supplied; in this nucleus we did not find Indians and it would be more fitting to describe it as a neo-Brazilian settlement, with a rural school and Catholic church; in the second place, one passes through Limão Verde proper, where we found two churches, one Catholic and the other Protestant; both serve also as schools, with a school of the municipality operating in the first and one of the
[875] Protestant mission itself in the second; in both, the teaching body is made up exclusively of Indians and mestizos (it should be emphasized that the município teacher is Pascoal Dias, nephew of old Daniel); finally, one reaches Córrego Sêco, whose children--in truth very few--attend the Limão Verde schools.

439 Limão Verde, comprising both nuclei, prefers to sell its products to Aquidauana, where they fetch better prices, although it also maintains trade relations with the neo-Brazilian

/88 cont./ [Limão Verde and Aldeinha]

439 settlement of Morrinho. Its principal products suitable for ex-
464 port are manioc flour, bananas, sugar-cane juice, and unre-
648 fined sugar in small bricks /rapadura/. The members of the
community work on the closer fazendas and in Aquidauana, and
177 many Terêna girls work as domestics in Aquidauana. And,
197 in spite of the wide contact that the community maintains with
foci of culture change, such as Aquidauana, the most widely
spoken language is the Terêna tongue, familiar even to the
non-native members of the community. We would venture to
say that this is a case of "Terenization" of the neo-Brazilian
and Paraguayan population, whereas in Lalima--another multi-
ethnic community--there was a gradual disappearance of the
tribal languages, with the imposition of Portuguese as the most
widely spoken language.

162 In the city of Aquidauana, in the suburban zone, there
361 live 39 families of Terêna Indians and mestizos that make up
a population of slightly less than 250 individuals. Living two
kilometers from the left bank of the Aquidauana River, on lands
they acquired themselves, these Terêna are regarded as people
of Aldeinha.

178 In 1933, three brothers, Gregório (Neco), Sebastião,
621 and José, passing through Aquidauana after leaving Buriti on
their way to Bananal, decided to buy some lands at the in-
sistence of a sister--already settled in Aquidauana--who wanted
[423] them near her, in the same city. With the sale of a few cattle
and horses, they bought about 40 hectares for "1,800,000 reis."
[622] Old Neco, /two plates appear here/ /89/ to all extents and
[166] purposes the head of the community, says that immediately
after settling down in that place, "compatriots" began to pour
175 in asking permission to live on those lands. Every night they
621 would station themselves at the entrance, singing religious
297 hymns. This activity made the little aldea that was forming
[533] become known as the Aldeinha /little aldea/ of the "Believers."
[795] Whether the persons who went to live there were already
Protestants, or became "Believers" through the catechization

[Text continues on p.127]

/89 cont./ [Limão Verde and Aldeinha]

175 of the family of the leader, Neco, is a question we cannot
621 discuss for lack of data. We can say, however, that the two
797 hypotheses are not mutually exclusive and that, in all proba-
795 bility, both "Believers" and "non-Believers" were drawn to the new community, and that, among the latter, the majority must ultimately have been drawn by the Protestant cults and the power of persuasion of their leaders. As a result, among the 39 families mentioned, only 13 are not Protestant. It [622] must be mentioned that two of the community leaders already had experience of religious proselytism. Old Neco, for example, had collaborated in the evangelization of the Terêna of Buriti, in the place called "Agua Azul," a community regarded today as Protestant.

162 With reference to the ethnic composition, it can be said
621 that the Terêna, although they are not properly speaking a
[144] minority, are outnumbered by the mestizo group, that is, by those individuals whose fathers or mothers are not "pure" Terêna. Of 211 persons listed in the census, 123 are mestizos (the fruits of interethnic or intertribal unions), 78 are "pure" Terêna (children of Terêna fathers and mothers), 3 are "Purutuya"-white, 5 are "Purutuya"-Negro, and only one is
101 Kinikinâu (one not being included). It should be explained
829 here that "Purutuya" is the designation in the Terêna language for the "civilizado," whether white or black, despite the fact that this term is a neologism applied initially to the Portuguese.

464 It can be said that Aldeinha lives on employment in the
648 city of Aquidauana. Over half its inhabitants work in the city,
[241] that is, hold jobs of an urban nature, while the other part is divided in doing farm work on neighboring fazendas and small
[742] farms, or on their own farm plots. Like Limão Verde and, naturally, on a much wider scale, Aldeinha serves as a domestic workers' pool: nearly all the young girls in the community have already been employed in the homes /90/ of the city and they are constantly sought out in the aldea itself with offers of employment.

/90 cont./ [Limão Verde and Aldeinha]

346 As in the other communities with a large Protestant
[162] contingent, Aldeinha has its church, relatively large and built
of bricks. It is the best building in the aldea, not to say the
[385] only one; there is only one other house behind the church,
342 which serves to put up guests. The dwelling houses or ranchos
are in the style typical of nearly all Terêna aldeas: "pau-a-
368 pique" and "taipa" /i.e. with mud walls/. There is no school,
although the church building has already been used for this
875 purpose. It is interesting that, in spite of the fact that the
628 community supports a teacher in the place called "Água
Branca," in Brejão aldea (Capitão Vitorino), it complains
[797] about not having one to teach its own children....This is what
might be called catechizing strategy: since in "Água Branca"
(and in Brejão as a whole) there are no "Believers," the leaders
of Aldeinha probably hope to catechize through the teacher
872 their "compatriots" in Brejão. The Aldeinha children attend
648 the município schools of Aquidauana, although they would
prefer to go to school in their own community, not only be-
cause of the distance, but also the difficulty they have in buy-
ing uniforms and shoes; cases of absenteeism from class owing
to lack of clothing are countless, as we were able to verify
197 in the course of our visits to the community. As for language,
178 it can be said that Aldeinha follows the example of the Terêna
communities that underwent a greater degree of the process
of social change, this being reflected in the gradual loss of
the tribal language, through the generations.

Brejão or Capitão Vitorino

361 Brejão or Captain Vitorino's aldea, as it is known, occu-
621 pies an area of 3,904 hectares, duly demarcated and with a
[133] deed /titulo/ for 2,800 hectares. The native reservation is
located in Nioac Município, with the Urumbeva River to the
north and the Maracaju range to the east. A document of the

[Brejão or Capitão Vitorino]

/90 cont./ A document of the
175 Serviço de Proteção aos Índios, dated 1919, reports that the
361 Terêna in Captain Vitorino's group (the uncle of the present
621 "Captain") occupied an area two leagues from the city of
162 Nioac and showed a population of some 200 individuals,
scattered through 11 ranchos; the same document estimates
at 1,000 persons the number of those who, up to that time,
had /91/ spread through the fazendas atop the Maracaju
range. (149) "Captain" Vitorino tells us that the present-day

113

149. Relatório Anual da Inspetoria de Mato Grosso /Annual Report of the Mato Grosso Inspectorate/, Archives of the S. P. I., for 1919.

aldea of Brejão was founded in 1904, when he and his family,
seeking a wooded area, abandoned the old Laranjal aldea,
166 close to the present one and also within the reservation. The
648 "Captain" says--and documents prove him right--that that
move of 2,000 Indians to the fazendas atop the range was due
to pressure of the neighboring fazendeiros who wanted by any
175 manner or means to take over the Terêna lands. After the
621 area had been made into a reservation by Decree of 1922,
648 only in 1925 was the native post established, thanks to Colonel
Nicolau Horta Barbosa, at the time inspetor for Mato Grosso.
162 Data from the annual report of that inspetor for the year
following the creation of the post list 178 Indians, among
166 whom 16 had settled in the aldea in that year. The flow of
those Indians to Brejão (a small part) and to the aldeas of
Buriti and Francisco Horta was beginning, as we shall see further
162 on. Thus, the 1954 census gives 202 inhabitants, a rather
small number, considering the size of the reservation.

361 Like the other Terêna aldeas, Brejão is divided into
621 "bairros": the central nucleus, called the Captain Vitorino

191 cont. / [Brejão or Capitão Vitorino]

361 Native Post, is central only because it comprises the post
●621 building, along with the Catholic church and six Indian dwellings; in the second nucleus, called Água Branca aldea, there is the bulk of the "reservation" population, with 14 ranchos on the banks of the Urumbeva and quite close to the old aldea of Laranjal. Água Branca is actually the oldest population concentration, surpassing by far the other nucleus, which is more important only from an administrative standpoint, since
872 the native post is built in it. The official aldea school
875 operates in the post building, its teacher is the captain's daughter, and it is attended only by the children of nearby homes. Thus, all of the child and youth population of Água Branca, which naturally includes most of the children in the community, is excluded from the official school and is served only by a small private school headed by a Terêna "Believer." (150)

872
798

150. This school in "Água Branca" was built only recently. In 1955, when we were there, there was only the post school, and the inhabitants of Brejão, as a rule, implied that they wanted nothing to do with "Believers."

872
628

Nevertheless, the above-mentioned group from Aldeinha--led by old "Neco"--organized a "passeio" /"walk"/ (the term used by the informant) to "Água Branca" and, as a result, the visitors were invited to build a school there. With four men from Aldeinha and some helpers from "Água Branca"

[342]
[875]

/91 cont./ [Brejão or Capitão Vitorino]

they erected a spacious shed and left there a teacher, at a salary of 3,000 cruzeiros a month, recruited from the Aldeinha Sunday services!

/92/ As for the ethnic composition of the community, it can be said that there are two mestizo families (Terêna--neo-Brazilian), one Guaikurú descendant married to a Kinikináu survivor, one Negro woman married to a Terêna woman.

Between the reservation and Nioac there is a "colônia," Monte Alto, made up to a large extent of Paraguayan elements. It has a rural school, with four teachers, as well as a "bolicho." The school is attended only by children from the "colônia," but the "bolicho" is frequented by Indians, neo-Brazilians, and Paraguayans. Thus, Monte Alto and Nioac maintain close contact and intensive trade relations with the native community. The Indians sell, chiefly to Nioac, maize, manioc flour, tapioca, gourds, watermelons, squash /Cucurbita maxima/, and sometimes unrefined sugar (the latter, according to the statement of one Terêna informant, "is not worth selling, it pays so little"). Aside from these products, the community plants for its own consumption the following species: rice, /sweet/ potatoes, beans /feijão miúdo/, cane, and earthnuts. And as in so many Terêna aldeas, religious proselytism is in the hands of Redemptorist padres, whose headquarters are in Aquidauana, and who come once a month to the community to say Mass and teach the catechism; but it must be said that on the reservation there is no building that might be called a church: the padres' activities are carried out in the private homes of the few inhabitants who call themselves Catholics. As for Protestants, we found that in spite of the two attempts to this effect on the part of the Bananal Evangelical Mission, there are no "Believers" in Brejão. Thus, the agents of culture change in the community are limited to the post, practically

192 cont. / [Brejão or Capitão Vitorino]

177 controlled by "Captain" Vitorino and his daughter, both rather closely tied to the regional way of life; the new teacher of the Água Branca school; the above-mentioned Redemptorist padres; and, outside the community, but no less effective, Monte Alto and Nioac.

Buriti

175 Among Terêna aldeas, Buriti is that most recently formed.
621 /93/ Nevertheless, it is not easy to pinpoint the time when
182 Terêna Indians were first to be found there. There are indi-
[101] cations that the place called Invernada do Buriti was occupied by Ofaié-Xavante Indians (151) who abandoned that spot,

175
621
648
723
[113]

151. The Relatório Anual da Inspetoria de Mato Grosso for 1927 says the following: "In fulfillment of my duties as Inspetor of the Serviço de Proteção aos Índios in this state, and in order to attend to the insistent requests of some Indians living at the place called Invernada do Buriti, on the boundary of the Fazenda de Correntes, município of Aquidauana, whose aldeamento, from what they tell us, has existed there for more than 35 years, on lands which they claim belong to the state, I ask you in accordance with the terms of Articles 90 and 95, Ch. VI

[Buriti]

193 cont.

175
621
648
423

of the consolidation of lands, mines, and colonization, Decree No. 130, of June 4, 1902, that you should see fit to designate as a reservation for the above-mentioned Indians an area of 4,000 hectares, or whatever may be feasible, adapting the circumstances relating to these lands with the minimum necessary so that they will have some land on which to live and work. It is held that there is a band of vacant lands on the boundaries of Fazenda Correntes that by being occupied by Xavante Indians, who preceded the present ones, was not included in the measuring carried out on this fazenda in 1896." (The italics are ours--RCO.)--For an idea of the history of these Ofaié-Xavante, see Darcy Ribeiro, 1951:109.

[162]

175
621
[162]
[166]
[648]
175
361

probably owing to pressure by the fazendeiros of the region.

It is quite possible that the present aldea of Buriti was established by Terêna Indian survivors of those who, during the Paraguayan war, took refuge atop the Maracaju range (to whom we have already referred in the previous chapter); or possibly also, by part of the Terêna from Buriti, former members of the Brejão (or Laranjal) local group. At any rate, up to 1913, at Invernada do Buriti, there was no Terêna aldea, as can be deduced from the map made at that time by Curt

[Buriti]

/93 cont./

175 Nimuendajú. (152) It seems that only since 1920-22 did Terêna
361
[166]
[114]

152. In 1913, on the order of Inspetor Luiz Bueno Horta Barbosa, Nimuendajú drew up a map locating the indigenous tribes of southern Mato Grosso, the original of which is in the map collection of the Museu do Índio (Seção de Estudos, S. P. I.).

families who had come down from the top of the range begin
[173] to concentrate in that area. The oldest members of the com-
[115] munity, when interviewed, were unanimous in their identifi-
175 cation of that time as the date of the founding of Buriti. On
621 the other hand, the first data supplied by reports of the Serviço
[162] do Proteção aos Índios, on Buriti aldea, already point out in
[233] 1923 a population of 420 persons, with livestock numbering
[423] 400 horses and 180 cattle. (153) But only at the end of 1927

153. Cf. Relatório Anual da Diretoria do S. P. I., p. 148, year 1923.

was the possession of 2,000 hectares of land for the usufruct of
[622] the /94/ Indians located there decreed. At this time there arrived in the community the present captain of Buriti, Joaquim Loureiro de Figueredo, (his name was borrowed from that of a former employer, a fazendeiro of the top of the mountain range), who is now almost blind and 80 years old; this captain told us that he was born in Brejão (in Laranjal aldea) and
16 worked almost ten years on Maracaju fazendas. In 1937,
621 Buriti had attained a population of 448 individuals, distributed
464 in 91 ranchos; and it would have been a much larger population,

[Buriti]

/94 cont./

16 621 [464] [113]

if it were not for the fact that some families had left to work on fazendas. (154) But the population did not cease growing,

154. The Relatório da Inspetoria Regional de Mato Grosso, for the year 1937, says the following: "Before (1937) the number of inhabitants was greater, but some families left in search of work, in order to acquire such staples as food and clothing. The lack of agricultural implements contributed to the departure of these families." And it cannot be said that the departure of Indians from Buriti was a minor affair, when we see that already in 1926 there were in that community 450 persons living in 52 houses, according to the Relatorio da Inspetoria de Mato Grosso for that year. We see that from 1923 to 1926, in three years, the population of the aldea grew by 30 individuals; and from 1926 to 1937, aside from the population dropping slightly, we see quite a big increase in the number of ranchos: from 52 to 91--

[Buriti]

/94 cont./

16
621

which shows that a much larger number of individuals would have been needed to occupy such a large number of dwellings, and that in 1937 many of those huts must have been unoccupied.

16
621 as can be seen from the 1946 census, according to which there were in Buriti 476 individuals, whereas in 1954 another census listed 483 inhabitants in the aldea.

361
621
[368] The aldea of Buriti is made up of three population nuclei which appear as three distinct neighborhood units: a) Buriti proper, where the native post, the captain's house, the post school, and the Catholic church are found, along with half a score of ranchos; b) Córrego do Meio, southeast of the central nucleus, with a population distributed in ranchos situated in an area of farm plots and winter pastures for cattle; c) Água Azul, a newer nucleus, whose members are mostly "Believers" and are situated well to the south of the Buriti nucleus, next to the boundary of the reservation (the fazendeiro next to the aldea donated to a Protestant mission a plot of land right on the boundary with Água Azul, where the missionaries built a church and a school specially for the Indians of the reservation). The result of this was the repetition in Buriti of the same processes of division of the native community that took place in Bananal, Passarinho-Moreira, Limão Verde, and, as we shall see below, Francisco Horta.

[795]
[797]

[184]

872 /95/ Thus, there are two schools in the community: one operated by the post, secular, although regarded by the Indians as of Catholic orientation; another, operated by the Evangelical mission, next to Água Azul. There was a time when, owing to the lack of a teacher in the official school, the captain of Água Azul, the Protestant leader, Benedito Reginaldo, was

[875]
[623]

[Buriti]

G /95 cont./
464 for the cows, thus employing very few people. (The Indians
648 have the usufruct of the milk of this cattle, and more rarely
233 the meat--since beeves are slaughtered only infrequently.)

/96/ Francisco Horta

Gi
361 The 3,600-hectare reservation, supervised by the
621 Francisco Horta Native Post, is occupied chiefly by Guarani
162 Indians of the Kaiwá subgroup, who are distributed among three
[101] of the four population nuclei in the aldea: a) the central
622 nucleus or Aldeia Farinha Sêca, where the dwelling of the
Kaiwá "Captain" João Fernandes is, located close to the
Gi native post and where most of the Kaiwá population lives;
133 b) Aldeia Bororó, as they call a concentration of 177 Kaiwá
622 Indians on the banks of São Domingos stream and which has
its own chief, "Captain" Ireno Isnardi; c) also Aldeia Proterito,
subjacent to the former one, made up of only four ranchos,
with 10 Kaiwá inhabitants, on the banks of the stream of the
G same name; finally d) the fourth nucleus, called Jaguapiru, is
361 made up exclusively of Terêna families that comprise about
621 180 persons living in ranchos along Saltino or Jaguapiru stream.
162
Gi By decree of 1917, signed by the president of the state
175 of Mato Grosso, the government donated those lands to the
621 Kaiwá local group which at that time consisted of about 550
423 individuals. It seems that only after 1917 did Terêna families
162 G begin to reach the reservation, coming from the top of the
175 Maracaju range. Everything indicates that the first families
166 were drawn there by the Coronel de Engenharia, Nicolau Bueno
621 Horta Barbosa, then inspetor of that region, with the aim of
648 stimulating Kaiwá agriculture through the known efficiency of
Terêna labor. The families that kept coming to Francisco Horta
were drawn by their relatives, who were settled comfortably
alongside the Kaiwá.

/96 cont./ [Francisco Horta]

Among the agents of culture change of the Terêna and Kaiwá communities, we note the Francisco Horta Native Post, built in 1924-25, along with its school, whose teacher is now a woman missionary from the neighboring "Missão Evangélica Caiuá"; the Protestant mission itself, with its well-equipped infirmary, nursery for orphan children, church, and school, all of these annexes being situated on a land plot next to the entrance of the reservation; several "bolichos" situated on the chief ways of access to the aldea; the fazendas of the region, characterized by the maté industry, with Paraguayans and Kaiwá Indians from Francisco Horta /97/ working on its extraction; and naturally, the city of Dourados, which is only five kilometers away.

As a result of the persistent work of the missionaries, nearly all of the Terêna community call themselves Protestants. On the other hand, the infrequent visits of the Catholic padres of Dourados to the reservation are not sufficient to attract the Kaiwá, whose religious vitality, so well analyzed by Schaden (155)

155. Cf. Egon Schaden, 1954:159-170.

keeps them attached to their own traditions. And as a result of the Protestant proselytism, one notes in Francisco Horta--as in the other indigenous communities where "Believers" have settled--a certain social tension, manifested in the discrimination of non-Protestant individuals toward those who call themselves "Believers," whether Terêna or Kaiwá Indians. From what we were able to ascertain during our stay at the mission--where we were for five days--, the religious bonds were stronger among the Terêna and Kaiwá than the tribal bonds; that is, all of the "Believers," without consideration of tribal or ethnic origin, were united against those who did not profess the same creed.

[Francisco Horta]

G /97 cont./

Gi But if we were to compare the Terêna and the Kaiwá
433 populations in Francisco Horta, the latter would leave much
511 to be desired in terms of economic development. Actually
241 the difference is quite real; the Terêna families exhibit an
439 adequate standard of living, based on good farm plots and
Gi regular trade with Dourados, aside from well-built houses
[464] similar to the neo-Brazilian dwellings in the region; whereas the Kaiwá look quite poor, tattered and with an agricultural production that is hardly enough for their own consumption, compelling them to hire themselves out for the maté industry or any other work on the fazendas of the region.

G To close this chapter, in which we endeavored to analyze
● 621 from an ecological standpoint the present configuration and
433 distribution of the Terêna local groups, we can say that all
648 the communities studied are characterized by being turned
464 toward the outside: not only through the fact that the Terêna
177 try to place all of their production on the regional market (leaving a small part for their own consumption), but also, and principally, through their being hired by the fazendas, where they find their principal source of income. We have seen in this brief analysis how rare are the /98/ cases of self-sufficient Terêna families, understanding by this the fact that they are not obliged to work outside their own lands for their survival. Nearly all of the useful population (from 20 to 50 years of age) is connected with the regional labor market, al-
[171] though as a mobile group. This permits us to state that here is a phenomenon of economic integration of the highest degree, when we compare the Terêna with other tribal groups that are also "integrated into Brazilian society," (156) but not necessarily assimilated by it.

121

156. We use the concept of "integrated" to characterize the end situation of a continuum at the opposite extreme of which are the "isolated"

[Text continues on p. 142]

/98 cont./

121 economic life of which they have become incorporated as reserve labor or as specialized producers of certain articles of trade." (Ibidem:13.)

● 62/ assimilated by it. In the particular case of the Terêna com-
648 munities characterized above, it is seen that their components
177 continue to be so closely connected with them that nothing indicates that they can be assimilated into the regional society in the foreseeable future. Psychological and social mechanisms prevent the process of assimilation from developing in a positive
[[28]] manner. But before we deal with these mechanisms, we must say something more about these communities, analyzing them in the next chapter in terms of their socio-cultural variations. This will complete our idea of the conditions of existence of the present-day aldea Terêna.

/99/ VI. Socio-cultural Variations among Terêna Communities

121 The present chapter will be devoted to an analysis of
[[28]] socio-cultural variations among Terêna communities, in an attempt to understand the behavior, expectations, and claims of their components. In a concrete manner, we want to know what the pattern of conduct (157) of the present-day Terêna

157. We use conduct as a concept intermediary between "society" and "individual" and operating "in that strategic area where individual behavior becomes social conduct." (Nadel, 1957:20.)

/99 cont./

121 is and what form it assumes in the various communities visited
[184] by us. In the preceding chapter we made quite clear the variety
[621] of configurations and the considerable differentiation existing among communities, insofar as, for example, ethnic composition or even antiquity itself is concerned.

184 Taking the first variable, we have, on the one hand,
162 the following aldeas: Cachoeirinha, Bananal, Ipegue,
621 Passarinho, Moreira, União, Buriti, and Brejão, as ethnically homogeneous communities, with more than 90 per cent Terêna individuals; on the other hand, we have Lalima, Francisco Horta, Limão Verde, and Aldeinha, (158) made up of survivors

158. It is possible to include in this same category São João aldea: with Terêna and Kinikináu Indians and a large number of mestizos.

of already extinct groups such as the Kinikináu, Layâna, and Guaikuru, or of Guarani or Paraguaian individuals, where the Terêna are in the minority or in the same numbers as the others. In these latter communities we would also have to consider the index of mestizos--fruits of interethnic or intertribal unions--, who in some of the aldeas are of great importance for a socio-cultural characterization.

184 As for the second variable, we might imagine a
175 "gradient" /100/ in which we would have at one extreme
621 Cachoeirinha, Ipegue, and Bananal, and at the other, Buriti,
177 Aldeinha, and União, without leaving out the Terêna "community" of Francisco Horta, whose components reached that Guarani aldea no earlier than 1917. The time when the aldea was formed is very important to the present inquiry, insofar as it helps us to understand the greater or lesser resistance of
[144] the communities to change. The older communities, such as
[146] those referred to above, show greater cultural vitality, revealing

/100 cont./

184 a lower index of deculturation in comparison with the newer
175 ones, whose components had a lengthier experience of non-
621 communal life, hired out as they were to the great fazendas
177 of the region. The high mobility of these Indians, moving
464 from fazenda to fazenda, did not permit a more permanent
166 co-existence of families, necessary for the establishment of greater group solidarity and for keeping alive the tribal "we." Few of the families remained together for a long period in a fazenda "colônia"; for the very reason that those who did stay did not leave the fazendas in search of "lands of their own"; they remained settled in their own "community," as long as they found there sufficient "tribal consensus," supplemented by a consistently reliable labor market. This is the case, for example, of the Terêna "colônia" on the fazenda of Sr. Raymundo Correia, in Duque Estrada, comprising six ranchos and a considerable number of children who attend
[466] the settlement school. Nevertheless, the great majority of fazendas offered the worst possible working conditions, whereby the individual received, in kind, the minimum necessary for his survival, while working, a fact that is explicative of his high mobility.

184 In spite of the differences pointed out in the previous chapter and susceptible--as we have seen--of classification into polar categories, we note a considerable cultural uniformity when we take the Terêna population as a whole. There is a common denominator that permits us to regard the local groups as made up of a relatively homogenous population from the
184 cultural standpoint. It can be said that the Terêna cultural
177 patrimony adapted to a variety of interethnic and intertribal
178 contact situations, without presenting on this account important differences in terms of the pattern of behavior. The latter seems to have remained relatively constant throughout the communities, although /101/ this does not mean that this behavior remained immune to such objective conditions as the politico-religious situation of the aldea or intervention from

/101 cont./

184 the outside, represented by the Serviço de Proteção aos Índios
177 and the religious missions. External intervention and the
178 politico-religious situation nevertheless did not lead to a sufficiently significant deviation from the existing norms (of the Terêna universe) to make for two or more Terêna subcultures. This will become clear as we analyze the most relevant socio-cultural variants, i.e., those that resulted from the operation of the agencies of culture change that were most influential in the configuration of each community.

177 The actuation of the Serviço de Proteção aos Índios,
648 even though it is practically the same in relation to Terêna
184 aldeas that have native posts, differs considerably in relation
621 to aldeas without posts, those where, for various reasons, the S. P. I. was unable to set itself up or did so in a precarious fashion. In this latter situation is found the aldea of Passarinho and, with it, Moreira, under the circumstances referred to in the previous chapter; in the former situation, can be noted Limão Verde, Aldeinha, and União, the last two being private properties, and the first one an aldea whose lands, not yet demarcated or set aside as a reservation, did not stir the S. P. I. administration to build a post and place a superintendent in it. For this reason, these five communities hardly share in the protectionist activities of the government, being marginal to the minor help received by the other aldeas. (159)

648
621

159. When we once asked a superintendent about the aloofness he maintained with respect to one of those aldeas--which were rather close to his post--, he replied that he had nothing to do with those Indians since they did not belong to his aldea. --It is clear that such an attitude does not go

/101 cont./

648
621

unperceived by the communities that were not fortunate enough to get a post which, for better or for worse, would supervise life in the reservation. Although this is not in accordance with the administrative norms of the S. P. I., it has not been possible to avoid this distortion to which a large part of the superintendents are subject. The most obvious case is that of União aldea, which, because it is not a reservation but a private spot acquired by the Indians themselves--, does not receive the slightest amount of help; and even, it can be said, is regarded quite unfavorably by the great majority of S. P. I. officials.

648
621
433

In aldeas where the S. P. I. is located, the impression is conveyed of very slight concern with the communal economy, i.e., that of the Indians themselves, which is neglected in favor--of what we shall call--the post economy. We shall not here go into the merits of this "policy," since we do not /102/ know to what extent it reflects the directives furnished by the central administration, in Rio de Janeiro, or the regional one, the inspetoria, in Campo Grande. The truth is that there is very great concern over the production of the post, i.e., that resulting from labor financed by the S. P. I, whether it relates to farm plots, to cattle-raising, or to the extraction of wood or angico bark. This labor is ordinarily carried out by the

/102 cont./ This labor is ordinarily carried out by the Indians themselves, who are paid especially for this, but this does not exclude the hiring of a "Purutuya," nearly always in the capacity of a post employee. The superintendents explain that this production reverts to the benefit of the post and the aldea, while part of it is also laid aside for those families whose heads, for reasons of illness, are unable to support them. (160)

160. This expressed a wish on the part of the officials rather than reality. In the first place, because production, with rare exceptions, was relatively insignificant, often almost nonexistent; in the second place, because the income resulting from production was not always put to use in the aldea or post itself, but channeled to Rio de Janeiro, where it was deposited as native revenue, to be applied to Indian assistance generally, at the discretion of the S. P. I. Diretoria. For these reasons, the Indian never participated in this work with enthusiasm, since he only rarely benefited from the revenue obtained by the post.

There are posts, for example, which are characterized by possessing good herds of cattle, such as Lalima, Buriti, and Brejão, whereas others have an agriculturally oriented economy, with their plots of rice, cane, and manioc, and recent experiments with small coffee plantations. Cachoeirinha can be taken as the most representative of this latter type.

/102 cont./

433 can be taken as the most representative of this latter type.
648 As for the extraction of angico on reservation lands, or of timber itself, for commercial purposes, this varies according to the central administration, in Rio de Janeiro, which now permits it, now forbids it, pleading, in the second case, the
[434] protection of the native patrimony. The fact is that this extractive activity is not a regular source of income for the post or for the Indians.

184 In regard to the economy of the native community proper,
● 621 the differences relating to the systems of production are not
433 so great as to lead to the establishing of different types of communities. It can even be said that the cattle of Buriti, for example, or the rice fields of Cachoeirinha, influenced the character of native production in the respective communities very little or hardly at all. Few are the families /103/ that benefit from the post production, whether through receiving seeds in considerable quantities, or through having access to a good breed of cattle to improve their herds. The great majority of the population are left aside from the post's economic
[241] program. And what characterizes the families is that they
[464] work on plots of their own (sweet and bitter manioc, beans
[511] [feijão miudo], and sometimes rice) which are not even sufficient for the family subsistence, achieved only with the
184 men's employment on the regional labor market. As we could
511 see in Chapter V from the study of individual communities,
434 the great majority of Terêna families, regardless of the aldeas
464 to which they belong, satisfy their most basic needs by
[463] combining the produce of their fields with money earned out-
[314] side the reservation, whether tending the cattle or pack oxen of the fazendeiros of the region, or in agricultural work, for which the demand is constantly increasing--as coffee cultivation is taken up by the neighboring middling and small farmers--, or in the extractive industry, where the Terêna are experts in the difficult art of extracting angico bark without damaging it.

/104 cont./
797 missionaries managed to organize groups of Indians who were
798 relatively imbued with the doctrine and practice of the gospel, through whom they went on to convert, in certain aldeas, a considerable number of individuals, to the point of creating a certain hostility between the Protestant converts and the
● 621 non-Protestants or Catholics. (163) Typical, in this respect,
798

163. Consult Rattray-Hay, op. cit.

is the aldea of Bananal, followed closely by Limão Verde, Buriti, and Moreira-Passarinho. In these aldeas, it can be said that there occurred a division of the respective communities into /two plates appear here/ /105/ two groups: "Catholic" and "Protestant." We use these terms in quotation marks, because the mechanism that grants access to each of
177 these groups is probably as much political as religious. It
797 should be made clear, however, that other agents of culture change, such as the native post and the school it controls, are not being overlooked as active elements in the process of conversion, whether in a positive or negative way. There is no question that these agencies represent, alongside the missions, an unique and special instrument of change. Only by an attempt at abstracting on the part of the researcher, by identifying each of these agencies as variables of the same complex, does it become possible to differentiate the elements that make up this instrument. Thus, it might be said with Mayer Fortes that "the conversion of an individual or group frequently represents the culmination of a process brought about in the total complex by contact influences, of which the mission is only a single component." (164)

164. 1938:67.

[text continues on p.152]

/106 cont./

797 We were able to record many cases of individuals (or even
648 entire families) who adopted the other religion because of
578 matters of dissension in the community, because their ad-
795 versaries were leaders or enjoyed high "status" in the group to which they belonged and which they left in retaliation. Even more usual was the channeling to the "Protestant" group of those dissatisfied with the post administration. But it must be emphasized that these individuals did not on this account necessarily remain in the new politico-religious group adopted, since at the first opportunity they changed categories once more, passing with relative ease from one group to another, in accordance with the political situation of the moment.

797 There are other cases, less frequent however, in which the
795 motive for the change of "religious ideology" was much more
273 prosaic, such as the simple wish to drink rum: the express prohibition to Protestants against alcoholic beverages gave rise to situations in which a Protestant convert (not yet fully integrated into his new faith) ceased to be one when the desire to drink came upon him; then we would get the curious fact of individuals who remained for one year in one religious group (in this case the Protestant group) and spent a few months in the other group, as long as their desire to drink lasted!

● 621 In short, in the four aldeas mentioned, in which Protestant
798 missionaries managed to introduce the "new faith," the result
665 was the division of the community into two politically distinct
[648] groups. And in two of them, at least, this division was aggravated by the activity of the post superintendents, who took the side of one of the groups (usually the "Catholics"), making
[797] even more difficult their mutual reconciliation. This party character, /107/ preponderant in the recruitment of individuals into either of the groups, shows the shallow religious content of both. (165)

795
771 165. Altenfelder da Silva, in his work on Bananal, refers

/107 cont./

795
771

to the religious inconsistency of these groups, felt even by the missionaries themselves, who commented that "the Indians are inconstant and weak in their faith" (1943:359).

621
798
665
184

For this reason, it would not be fitting to say here--as did Redfield in relation to Chan Kom--that the introduction of Protestantism resulted in a new subculture: that of Protestant converts. (166) Aside from the factors emphasized above, it

771
[171]

166. Robert Redfield, 1949:355.

should be added that the Terêna--and we might extend this observation to the other Guaná groups, insofar as the bibliographic material permits us--never showed much religiosity, so characteristic in their Guarani neighbors. (167) Excluding

[172]

167. Cf. Ego Schaden, 1954:159-170. On the other hand, contrary to what occurs in various Brazilian tribes such as the Boróro or the Guarani themselves, in whose cultures religion is a symbol of tribal identity, among the Terêna it can be said that the old body of beliefs seems not to have survived the impact of Euro-American society.

/108 cont./
000 endeavor a futile one. It is sufficient for us to bear in mind
797 that, since the Christian religious complexes did not penetrate
177 deeply into Terêna culture, the behavior of these Indians has
182 not been very much affected, unless we regard as important the acceptance on the part of the "Believers" of certain rules of comportment, such as not drinking, not smoking, and not dancing, which are not difficult to find among the "Catholics" themselves, or those without religion. Hence, we do not find two really distinct /patterns of/ behavior created by the
795 activities of the different missions. Those of both, to a greater
771 or lesser extent, attend the shamanistic practices and appear
796 at the religious and secular festivities that mark the life of the community. On the days of St. John, St. Sebastian, St. Anthony, and St. Benedict, the entire population participates in the secular part of the commemorations; the same may be said of "Oheokoti" and Holy Week, nowadays merged into a single body of ceremonies, in which are evident on the same plane Christian and pagan elements and secular practices.

184 /109/ On the basis of the complex politico-religious
621 situation generated by the diversity of motivations which
797 operated in the conversion of the Terêna, we can classify their
795 aldeas into three groups: a) Cachoeirinha, Ipegue, and Brejão, as aldeas where Evangelical proselytism was not very successful, their inhabitants continuing to consider themselves
665 "Catholics"; (169) b) Bananal, Limão Verde, Buriti, and

169. In these villages as in the others--with the exception of União, Aldeinha, and Francisco Horta--the Terêna are visited by the North American Catholic padres of the Redemptorist Order who have their headquarters in the principal cities of the region.

/109 cont./

184 Moreira-Passarinho, (170) as communities practically divided
621
797
795
[65]

170. For analytic purposes, we are considering Passarinho and Moreira as making up a single community, since for all practical purposes they occupy a single reservation (cf. Chapter V).

into two different politico-religious groups; and c) União, Aldeinha, and Francisco Horta, as "Protestant" communities in view of the fact that the totality (or near totality) of their members have already adopted the "new creed," or else that it is in the process of being adopted, (171) without having on

621
795
511
[84]
[182]
[648]

171. Such communities are also characterized by the fact that they present a standard of living considerably higher than that of the other communities. Nevertheless, nothing permits us to set up a causal correlation between "Protestantism" and economic development. Other variables deserve consideration, such as the Terêna-Kaiwá competition in Francisco Horta, or the União group's need for self-sufficiency, in view of the total lack of interest on the part of the S. P. I. for the fate of that small and independent community. On the other hand, we found in the

/109 cont./

621
795
511

> "Protestant" nucleus of Água Azul, in the Buriti reservation, the lowest standard of living, while we ascertained in Bananal that the wealthiest families were "Catholic" or were already in favorable economic conditions when converted to Protestantism.

184
621
797
795

this account divided the community into two antagonistic religious groups.

184
177

The socio-cultural variations indicated so far have served to show that the Terêna population, settled in aldeas, despite the different configurations and the diversity of experiences it has undergone, has maintained on the whole a relatively constant behavior. But while this behavior developed different styles (such as the pious attitude of the "Believers" and the freer comportment of the "Catholics"), this does not mean that it varies sufficiently for us to regard as legitimate the existence of two or more Terêna subcultures brought about as a result of the acculturation process. This, we believe, has been sufficiently demonstrated.

177
167

Nevertheless, this work would not attain its objectives if we did not /110/ consider another facet of the problem of the interaction of the Terêna with the Brazilian society of southern Mato Grosso: the mobility of part of the Terêna population, who, as separate individuals or as families, leave their aldeas of origin and go on to live in cities such as Miranda, Aquidauana, and Campo Grande. Nothing has yet been said about this numerically inferior portion of the Terêna population, which is nevertheless considerable. Acculturation and mobility, as two dimensions of the same process--which we shall call assimilation--will be the themes of the next chapter.

/113 cont./

121 this social group from others." (180) This second formulation

180. Ibid.

of the concept of acculturation will permit us to use it in the dynamic analysis of the Terêna population settled in aldeas, whereas the concept of social mobility proves adequate to an analysis of the Terêna who reside in the cities. This does not mean that the latter are exempt from culture change; it merely /114/ means that they are no longer subject to the mechanisms that govern a particular type of culture change, which we call acculturation.

177 The acculturation process to which the Terêna popula-
621 tion is subjected (we refer to the population that is settled in aldeas, i.e., that has a communal life) has had different results as a consequence of the variations encountered among the communities as a whole. Let us take ethnic composition and antiquity--incidentally, variables noted at the beginning of the previous chapter--and we shall see how they have in-
184 fluenced the cultural configuration of the communities. The
177 aldeas of multiple ethnic composition, such as Lalima,
621 Francisco Horta, Limão Verde, and Aldeinha, tend to be much
[162] more open to innovations, whereas the others, although they cannot be regarded as closed, show greater resistance to those techniques and ideologies that come from the outside. (181)

[121]

181. We are using these concepts, although in an unorthodox manner, in the sense in which they appear in the already-mentioned 1953 document on acculturation. (Cf. 1954:975-976.)

[166] The analysis of antiquity, in turn, as a category that permits

/114 cont./
184 us to differentiate (a) the traditional local groups from (b) com-
177 munities formed by individuals coming from fazendas, (182)
621
166

> 182. In spite of almost all the Terêna population having lived on fazendas, at least for a relatively short period, some local groups were not broken up altogether, making possible a regrouping, to their benefit, of scattered families which, in a former time, were tied to them: in this situation are Cachoeirinha, Ipegue, and Bananal.

leads us to verify the existence of greater receptivity to new cultural elements in the aldeas of more recent formation (b) such as Buriti, aside from the already-mentioned Francisco Horta and Aldeinha, which are included in the first category (multiple ethnic composition), and for this reason, are "doubly" open. União appears here as a special case, even though it is the most recently created aldea; its members did not come from fazendas, but from a community like Bananal, and thus are not very different from the Protestant "community" from which they split for circumstantial reasons. (183)

183. Cf. pp. 120-123.

178 In the first (a) group of aldeas, for example, there is
535 still in force the "bate-pau dance" (Kohitxoti-kipahé), as well
527 as the "race of the little horses" (Ivuixote-vogomoto), as tra-
ditional play activities performed on festive days, such as
Indian Day, September 7 /Independence Day/, /115/ etc.
648 These "games," already mentioned in Chapter III, were actually

/115 cont./ An interesting
178 example of the importance of this recreational institution in
535 the old communities--group (a)--, although they may, like
797 Limão Verde, have a multiple ethnic composition, is the re-
796 birth of the "bate pau" thanks to the action of the Redemptorist padres who took upon themselves the role of "producer." It seems that the first attempt was made on January 20, St. Sebastian Day, when there was a procession that included among its members, "in closed /116/ ranks," the group of dancers of the "bate pau!" This shows the strategic use of "secular games" in religious ceremonies. And the result of this was so positive that the Redemptorists were scheduling a repeat performance for August 1, day of St. Alfonso, patron of Limão Verde. (185)

178
535
621
184

185. I do not believe that it would be difficult to revive these "secular games" in the communities of Brejão or Passarinho, in view not only of their homogeneous ethnic composition but of their relative antiquity, which makes them likely to include some old Terêna individuals familiar with the "scenes and steps." Moreira, an aldea even more recent in origin than Passarinho, was formed almost exclusively by individuals coming from the fazendas, most of whom had never seen a "bate pau" or a "little-horse race," which would make their

/116 cont./

178
535
621
184

participation in activities of this sort very difficult.

178
184
621

It is true that these variables are significant to an understanding of the survival of these "games," and also (in terms of the same mechanisms) for the study of certain cultural complexes still in force in the old aldeas, such as the traditional forms of burying the dead (with all of their belongings), the use of kinship terms, or the peculiar sexual division of labor, all of these complexes having disappeared from the communities of the second (b) group, as well as from those of multiple

178
756
755

ethnic composition. But it cannot be said that such variables have the same importance for the analysis of the magico-religious rituals organized by the Koixomuneti. Wherever there is a Koixomuneti--and they are spread through all the aldeas and even in the cities, as we shall see below--the rituals are carried out, their "results" varying of course (according to the testimony of the Terêna) with the mastery of magical

178
796
[177]

practices possessed by their agents. What can be said is that the old Oheokoti, heralded--as we saw in Chapter III--by the appearance of the Pleiades, today has practically disappeared, replaced as it has been by the basically Catholic activities of Holy Week. Nevertheless, there are indications that up to 1955 (!), in Bananal, the Oheokoti was performed with some regularity in its traditional form, i.e., with the magico-religious ceremonies followed by the activities of the Yanakalu, by the collective meal, and concluded with the Mootó. (186)

186. The informants, in Bananal, told us that it is becoming increasingly difficult to gather participants, and that on the last occasion they managed to get only ten individuals, counting old and young.

/119 cont./
121 of course the possibility of direct contact, at least as a substi-
162 tute for participant observation, which has now become alto-
369 gether inadequate. To make such contact possible, the
appropriate measure was to reduce the area, while taking care
[101] not to distort the reality to be studied. Thus, we focused the
investigation on the cities of Campo Grande, Aquidauana, and
Miranda, leaving aside Nioac and the small settlements (with
one or two Terêna families) as well as the fazendas--in view
of the long distances involved, of the small amount of time
available, and of other minor difficulties. Concerning Nioac,
the information we had indicated that the number of Terêna
families living there was insignificant, although slightly higher
than in Miranda, which in turn has not more than eight families,
comprising altogether 54 individuals. (190) As for the fazendas,

• [121]

190. We are considering only the Terêna who live in the city, not including the inhabitants of Passarinho and Moreira, suburban aldeas of Miranda.

we were acquainted with the situation of the Terêna living in
/120/ some of them in the município of Miranda. This, at
least, permitted us to visualize some problems, already men-
tioned in Chapter VI, when we dealt with the Terêna "colônia"
[125] near Duque Estrada. However, just to get an idea of how wide-
ly the Terêna are distributed through southern Mato Grosso, we
made an estimate of their numbers, in one município alone--
that of Aquidauana: living in the city there are 12 families,
a total of 67 individuals (this datum is exact, for we carried
out a thorough census); adding this to the probable number of
individuals living in the farms, fazendas, and colônias, which
add up to about 315 persons or 43 families, we have a total of

/121 cont./

369
162 As for this aspect, it can be said that, of the total urbanized population, 53.71 per cent are mestizos (a) and (b); at present in Cachoeirinha, the index of mestizos (a) and (b) is scarcely 16.31 per cent.

369 The /122/ importance of this will be examined in the next
162 chapter, when we shall deal with interethnic unions as the
582 preferential type of marriage in the cities.

369 The analysis of the origin of this urbanized population,
167 as a whole, discloses that the fazendas are the greatest sources of individuals for the cities, with 23.55 per cent; in second place is the aldea of Bananal, with 13.63 per cent, and in third place, the aldea of Ipegue, with 10.33 per cent. The percentage of persons born in the cities themselves is 33.05 per cent, and the rest of the population originated from small settlements such as Agaxi or Taunay and from aldeas like Lalima and Brejão, whose individual totals are very low and represent insignificant indices. If we bear in mind the low percentage of individuals born in the urban zones (33.05 per cent) as compared with the 66.94 per cent of people who came from the rural zone or from the aldeas, we can conclude that
167 this urbanized population is relatively new. And regarding
369 the Terêna who emigrated from the aldeas, one notes that
621 they tend to keep up their respective local groups, forming more or less cohesive nuclei in the cities where they live. In Aquidauana, for example, this separation is clear: aside from Aldeinha--which is suburban to the town--the Terêna live in two other places called respectively "Guanandi" and "Buraco Quente /hot hole/"; whereas in the former there live 11 persons who came from Ipegue and only one who came from Bananal, in the latter there live 10 persons from Bananal

/122 cont./

167 and only one from Ipegue. This attests the importance of the
369 local group in the migratory movements of the Terêna, with
621 their tendency to survive wherever their members emigrate,
[165] whether to cities or to other aldeas--as happened with the Indians of Lalima in their move to Cachoeirinha and their settlement at the place called Capão, which we have already mentioned in Chapter V.

369 It is clear that the survival of the local group in the
621 cities cannot be explained only by the "local-group consciousness." Another factor here is kinship, in combination with compadrio relations. Religion, which at first we had regarded as primordial, turned out to be a secondary or complementary factor in the grouping of these urbanized Indians into neigh-
369 borhood areas. The neighborhood groups--and we regard them
621 in the broad sense of the term--bring together indifferently
795 "Catholics" and "Believers," although these two groups tend to have separate "neighborhood lives," determined by the religious obligations of the latter, /123/ who are always more strictly controlled by their church. Nevertheless, the number of "Protestants" who live in cities is much smaller than that
[162] of "Catholics." Discounting individuals without religion (5.37 per cent) and those not included (7.02 per cent), out of 242 individuals, 197 (81.40 per cent) identify themselves as Catholics and only 15 (6.19 per cent) as Protestants. And this difference between the numbers of "Catholics" and "Believers" remains more or less the same in the three cities
369 visited, when taken separately. This high number of "Catho-
621 lics" can be explained, in turn, by the reluctance of the
795 Terêna to appear to the interviewer as individuals without
771 religion, and thus not "civilizados".... The low percentage
829 of Indians in the "no religion" category, in a population with such a meager religious life--as we have already shown in the previous chapters--, can only be understood in terms of the distortion undergone by the information on being supplied by the interviewee. To declare oneself a "Catholic" is

/135 cont./

*177 or catechization, in the Americas, in Asia, or in Africa, as is
297 well attested to by a copious bibliography, the Terêna, obvious-
[171] ly, did not escape this contingency. In the two preceding
[821] chapters, especially in Chapter VI, we paid considerable attention to the consequences of religious proselytism, insofar as the configuration of the communities that underwent it is concerned (dividing them into two antagonistic politico-religious groups), as well as the role that the missions played and continue to play in the acculturation process. It remains for us to indicate, in this chapter, to what extent the activities of the missions permit us to regard them as convergent factors in the assimilation process.

*177 As was already said, religious proselytism cannot be under-
297 stood if we take the missions as a whole, without differentiating
271 the Catholic from the Protestant action. Both have aspects that are peculiarly their own. The action of the Catholic missions, especially in the 19th century, must have been relatively efficient in the task of breaking down and disordering the old Terêna religion, even though it did not succeed in introducing a system of beliefs that was more or less coherent and able to diminish the "cultural distance" between that tribal population and the European civilization represented by its
[829] missionaries. It seems that the only result of this missionary activity--as far as the tribal ideology is concerned--was to create a new identity for the Indian: that of Christian. This identity was accepted by the Terêna as the equivalent of that of "civilizado," but it was not on this account accepted as such by the "Purutuya," to whom the Indian continued to be a
[291] "hick." The distance between the "Purutuya" and the Indian,
[191] at that time, was much greater than the one that exists today, in view of the fact, for example, that the Terêna only began to use clothes or to become a characteristically bilingual group in the 20th century, to cite some of the most evident
[295] aspects. The concept of "Catholic," as a category of personal
[829] or group identification, arose recently, as the result of

/40 cont./

602 1. (cont.)
601 mother's brother's son," and "my mother's
brother's daughter," nevoangé. -- In my
[114] work Tereno-Texte /Tereno Texts/ I shall
publish all the kinship terms of the Tereno.

602 father's father of the children tells their mother's brother that
604 he should /41/ bring back from hunting something for them that
[178] they especially desire. It was like that formerly and it is often
[593] that way still today. The father only provides the ordinary foods
for his children, but not particularly desired delicacies.
582 While the people always marry within the village and the
● 621 husband builds the house for his wife and she becomes the mistress
622 of the house, chief's children only marry among themselves or,
591 when that is impossible, at least distant relatives of chiefs (1), and

[602] 1. Kinship extends to the grandchildren of the
[601] male and female cousins, whom one also calls
amorí, "my grandchild."

thus they marry outside the village and it is not infrequent that
622 the husband moves to his father-in-law's place. Nalikí's mother s
602 father was chief of the village of Mureira even before the Paraguay
War. He was called Himuná. His successor was Nalikí's father,
who was called Ečviagatí. He was the oldest son of the chief of
Abacaxí. Usually the eldest son of the chief becomes his father's
successor, if he does not have father's brother's sons who are older
[591] (see below). Since however, all of Himuna's sons had died and
left no male descendants, since Himuná also had no brother's
sons or sister's sons, and since Ečviagatí's father was still very
vigorous, Ečviagatí, as husband of Himuná's oldest daughter,
moved to his father-in-law's and later became chief of Mureira
as his successor; he handed over the rule of Abacaxí to his
younger brother after his father's death.

/89 cont./
owned, with the exception of his vesture, which is inherited by his son, who carries on in power. /90/

Over the cacique's grave they build a small rancho of palm leaves, as a mark of distinction.

Cóchómonety or Cacique. The power of the cacique falls from fathers to sons. When the first son or daughter of the cacique is born, the latter, a few moments later, breathes into the mouth of the newborn, which signifies that at the age of 15, approximately, he will receive power and will be ordained to caciqueship, following his father in power as soon as the latter dies. When the heirs reach the age of 15, the cacique holds a big fiesta, for this calling together all the caciques of the other aldeas. Dressed in a simple julata and with his entire body painted in divers colors, the boy being honored is surrounded by all the invited caciques, who form a closed circle and go around and around the young man, singing for a period of two to three hours.

When this ceremony has ended they go on to eat and drink and the fiesta lasts from two to four days, that is, until the food and drinks are exhausted.

Astronomy. Each new moon is a month and 14 moons are a year. The sun is called paphúyty; the moon calipahú-quethy; the month paphuyty; the stars perphaty; the sky piphá yty; the earth piphéytó.

Aldeas. In the municipio of Miranda there exist approximately from 12,000 to 14,000 Terena Indians and a large number of aldeas, among which I cite only those that I visited, the main ones being those called: Agachy, Boquehina, Marro, Marrinho, Ipeque, Santa Ana, and Caytapé. All the aldeas show the same type of construction, which is rustic, the houses or ranchos consisting of thin walls of bamboo with a roof of straw or palm leaves. One aldea differs from another only in the greater or lesser number of ranchos.

Agachy Aldea. This aldea has 26 ranchos, the largest being from 8 to 10 meters long by 3 to 5 meters wide; it is inhabited by 367 Indians.

/90 cont./

361 Boquehina Aldea. It has 18 ranchos, some from 6 to 8
342 meters long by 3 or 4 wide; it is inhabited by 298 Indians.
162
621 Marro Aldea. It has 24 ranchos, some from 9 to 10 meters long by 4 to 5 meters wide and other smaller ones; 386 Indians live in it.

Marrinho Aldea. It has 15 ranchos, the largest from 8 to 10 meters long by 2 to 4 meters wide; 257 Indians live there.

Ipéqué Aldea. It has 11 ranchos, some from 5 to 7 meters long /91/ by 2 to 4 meters wide, and others smaller. In it live 246 Indians.

Santa-Ana Aldea. It has 23 ranchos, some from 6 to 10 meters long by 3 to 4 meters wide, with 379 Indians.

Caytapé Aldea. It has 19 ranchos from 8 to 10 meters long by 3 to 5 meters wide, and 315 Indians.

142 Somatic data. The Terena have dark copper-colored skin, ugly flat face, low forehead, black hair, straight and thick, scanty beard, black eyes, a small nose, small mouth, strong, very white teeth, small ears, small hands and feet.

352 The rancho. The interior of the rancho of these Indians
[237] shows rustic bamboo beds covered with the skin of a cow or of some other wild animal. The hide serves as a mattress,
[415] the pillows are small bags stuffed with straw, there are in addition in the hut several hammocks, several clay pots for water, and some rustic benches, they have no table, their table is the ground.

The kitchen. This is a very simple rancho, or better said
353 a straw roof, some two meters square and a meter and a half
343 high, under which they keep dishes, pots, and other kitchen utensils.

771 Worship. The Terena believe that there is a God in the
825 sky and they believe in the virtues of the tail of the rattlesnake,
787 which has the gift of being able to communicate with the souls
796 in the other world. The only religious fiesta that they celebrate
[82] is the one which corresponds to our Holy Week; it is the passage of the seven stars; this fiesta lasts seven days.

Ce 167 361 /324 cont./ The extreme limit reached by the migratory wave is marked by the Chané villages of the Itiyuro River and by those of the Aguaray (Salta Province, Argentine Republic). Describing an immense arc of a circle above the northern Chaco, part of the emigrant tribes streamed out toward Paraguay and Brazil.

Ce Ga 101 105 "The Arawak Indians of the Chaco, whom linguists have recognized as closely related to the other Indians of this family, are known in the 18th century by the name of Chané and Guaná. The appellation Guaná has been reserved for the ensemble of the eastern Arawak groups and that of Chané for the western tribes. Like the Chiriguano, they make a very clear contrast with the other small tribes of the Chaco, and this antithesis is so strong that at first sight they look like an element that was implanted there. They are sedentary and pacific; and insofar as they have not been forced to abandon their ancestral customs, they live in villages solidly defended by palisades and devote themselves to the intensive cultivation of the soil. They know how to spin cotton and, like all the Arawak peoples, are remarkable potters. They do not practice infanticide and are not polygamous. The Jesuits hold them in high esteem, for they do not have idols.

Ce Ga 648 [131] "The two Arawak tribes of the Chaco, the Chané in the west and the Guaná in the east, used to live, the first in the interior of Chiriguano territory and the others in the domain of the Mbayá. They were both subject to these Indians and they depended on them entirely. This state of subjection varied according to the place. The condition of the Chané with relation to the Chiriguano was that of slaves to masters, of prisoners to conquerors. Among the Mbayá, the relations between the Guaná and their neighbors did not have so clear-cut, so brutal a nature.

Ga [621] "The Guaná appear sometimes as vassals and protégés of the Mbayá, sometimes as their allies. They are grouped into little closed communities, nearly independent. The bellicose Mbayá had the custom of taking a wife preferably from among their Arawak or Chamakoko subjects, and this explains the fact that the Mbayá wives and children spoke a different language from that of their husbands or fathers. Schmidel already
